Be the first. Add a review and share your thoughts with other readers. Be the first. Learn physics easily with controlled practice. Features 1,930 video solutions for all the regular problems in the 7th edition of Giancoli and 1681 solutions for most regular problems in the 6th edition. The final answer, presented in text form for a quick link over each video, and formatted nicely as an equation, $E = mc^2$. This is useful if you are in a library or a slow internet connection. The colors of the pen make the step-by-step solution clear. Red is used to illustrate the steps of algebra and replace numerical values at the final stage of the decision. When the solution switches to a new train the thought of a different color of the pen emphasizes the switch, so the solutions are very methodical and organized. Solutions are tested in the classroom and created by an experienced physics teacher. Videos come with a high-performance content delivery network. Don't wait for the video to load or buffer. Pause, rewind, repeat, and never miss what is said. Trusted by more than 4,400 students Dear Mr. Dychko, physics has never been my strong point, so I was nervous about taking physics this semester. I'm so glad I found your site! I am often confused during my classes because my teacher goes so fast over the material and is usually disorganized. Keeping the book a problem along with watching your video solution helped me understand the material much better. You even showed me a few tricks that I was able to successfully use during my exams. Thanks for creating this site! A student at the University of California, Irvine I would like to thank you for having the time and effort of developing I know it was a tedious task, but those of us who need extra help GREATLY appreciate it!! I wouldn't be able to do as well as I did in Physics II without step-by-step clarifications that have been provided. Thanks again for your efforts! I highly recommend using this site for those who take physics. Christie's, Winston-Salem State University, North Carolina These videos are 40 times more valuable than a lecture, a tutorial, and so much cheaper and effective than a private tutor. Maggie, Northwestern University, Evanston, Illinois Thank you very much... The videos were very helpful. I studied at McGill in a class of 650 students, so it was very helpful to be able to go on any issues I was unsure of. And your explanations were great. 5 out of 5 star rating from me. Kelly, McGill University, Montreal, Canada Thank you so much for having all these videos, you helped me get an A in both my college physics courses! With your help I ended up running almost all the problems in Giancoli's book. Not only did I get good grades, but these exercises proved invaluable for understanding and working out more complex challenges in advanced classes for my specialty in mechanical engineering.
